

2 Ton Marine Release Hook

Part # 200-APR-206-CB/CBH

This Cranston Eagle two ton rated marine off-load release hook used to launch and recover fast rescue craft and other marine applications. This model is US Coast Guard Certified and has been tested to six times it's rated capacity.

Design & Construction

This hook features an extremely robust welded frame and bolt on components. It is available with handles or without them. Release mechanism is actuated with a pull cable.

Hook Type Off-Load Only

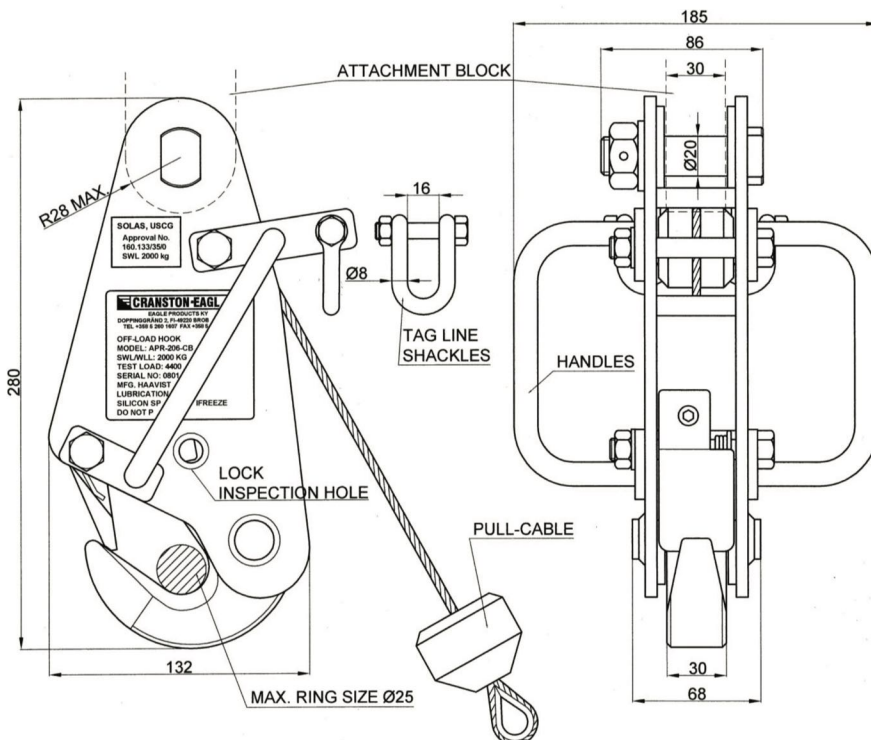

This hook is an off-load type hook which means that the load must be off of the hook before it will open by pulling the release pull cable. This is the safest of all hook types because of this fact.

Materials

The model 200-APR-206-CB/CBH is made entirely from marine grade stainless steel for extended service life and ultimate reliability in the marine environment.

Service, Testing & Recertifications

Delta T Systems is the Authorized U.S. Agent for Cranston Eagle marine off-load hooks, including parts, rebuilds, load testing and the required five year recertification services.
