

C2 PLUS MANUAL VENTILATION CONTROL

Part # 600-C2 Plus

The C2 Plus manual engine room ventilation control system is designed to provide variable speed control of one or more cooling fans to control the vessel's engine room temperature.

Control System Overview

Each C2 Plus system is designed with axial fans sized to provide enough cooling air to maintain the engine room temperature below the engine manufacturer's specifications.

Manual Airflow Control

The C2 Plus controller gives the vessel operator the ability to adjust the fan speed based upon the operating conditions. The fan operation is controlled by a touch screen interface.

Fire System Interface

The C2 Plus controller has an interface with the on board fire system for immediate shut down of the fans in case of a fire. The C2 Plus controller also provides an interface for an emergency shut down switch.

Automatic Startup

The C2 Plus controller includes a contact to accept an engine run signal to initiate ventilation system startup.
