

STOP THE INTRUSION OF CORROSIVE SALT WATER BEFORE IT GETS TO YOUR ENGINE SPACE.

Salt water has no place in the engine room or anywhere else on board. Stop it from entering with a Delta-T Moisture Eliminator. It is too costly not to!

- ✓ Impingement design separates water droplets as small as 10 microns from the airflow
- ✓ Engineered for vertical or horizontal airflow
- ✓ Profiles available in white or black PVC or Aluminum
- ✓ Customization available to fit unique openings
- ✓ Design and engineering help a phone call away

How it works.

- ① An elegant solution to a real problem on any boat. The Moisture Eliminator is specifically engineered to remove the damaging water in a simple yet effective way.
- ② As dry air passes, the entrapped droplets form a film on the profile and collect to form larger droplets
- ③ Gravity pulls the droplets to the bottom of the eliminator, and they drain overboard
- ④ Custom configurations available to fit any opening
