

# ROBUST, FAILSAFE FIRE DAMPERS – LEAVE NOTHING TO CHANCE

*When it comes to crew and passenger safety, fire dampers by Delta-T Systems are the only serious choice.*

- ✓ Unique design of closure and actuator assure failsafe operation
- ✓ A-60 rated dampers are USCG, MED and SOLAS approved
- ✓ Suitable for use with CO<sub>2</sub>, Halon, FM-200 and other pressurized suppression systems
- ✓ Wide range of standard sizes - custom designs available for most any application

## How it works.

---

Properly designed and engineered fire dampers play a critical role in a balanced, safe ventilation system.

- ① When open, allows fans to pull fresh air in and push hot air out
- ② Test switch allows for operational checks and inspections without having to replace the device
- ③ In the event of a fire, the actuator closes the blades so the firefighting equipment can do its job
- ④ Patented, overlapping blades assure secure closure
