

## 3.5 Ton Marine Release Hook

### Part # 200-ZAPR-356-C2B-VMX

This boat mounted Cranston Eagle 3.5 ton rated marine off-load release hook used to launch and recover fast rescue craft and other marine applications. This model is US Coast Guard Certified and has been tested to six times it's rated capacity.

### Design & Construction

This boat mounted hook features an extremely robust welded frame and bolt on components and a positive lock feature. Release mechanism is actuated with a pull cable.

### Hook Type Off-Load Only

This hook is an off-load type hook which means that the load must be off of the hook before it will open by pulling the release pull cable. This is the safest of all hook types because of this fact.

### Materials

The model 200-ZAPR-356-C2B-VMX is made entirely from marine grade stainless steel for extended service life and ultimate reliability in the marine environment.

### Service, Testing & Recertifications

Delta T Systems is the Authorized U.S. Agent for Cranston Eagle marine off-load hooks, including parts, rebuilds, load testing and the required five year recertification services.
